

# Love Your Worms

## Top Tips for a Healthy Happy Worm Farm

### HOT DAYS

- Put your worm farm in a cool shady area
- Make sure your worm farm does not dry out
- Water down the top cover (carpet)
- Freeze their food!
- Place a wet towel over the worm farm

### GOING ON HOLIDAY'S

- Ask a friend or neighbour to help maintain your worm farm while you are away
- You can give the worms some extra food but do not over feed, instead add some shredded paper or manure

*Did you know the common compost worm species are Red Wiggler, Indian Blue, Tiger and Night-crawler?*

# Love Your Worms

*When things go wrong*

If the worms all die have a sad moment but don't throw it all away as worm eggs will be there waiting for condition's to improve

Water the contents of the worm farm

Add some paper and a small amount of food scraps (not too much) and mix in

And wait for the eggs to hatch out!

This wont happen overnight, in a month or more you will see signs of life

## *Worm Wiz*

Worm Wiz is the liquid at the bottom of the worm farm

Dilute the worm wiz with water

(It is a liquid fertilizer)

1 cup of worm wiz to one bucket of water (1:10)

Use it straight away on plants and veggies

Don't store the liquid for too long as the beautiful bacteria it contains will die

## *Worm Castings (Worm Soil)*

After about a year you will get a quantity of worm castings, your food has turned into a nutrient rich worm soil

Mix it into your garden or add a handful of the worm castings in a bucket of water and use as liquid fertiliser

If you see worms in the fertiliser pull them out or strain them off and return them to the worm farm, easy!

This worm soil contains worm eggs that will hatch out into your garden
